DK T.M.I INT'L

Business philosophy to secure the newest and best quality products starts from the best facilities and systemized management!

Greetings

We are specialized in the production of the industrial and technical butterfly valves since our foundation, and thus have obligations and the strong will to develop the new phase of valve for the jump of Advanced Industrial Korea and have devoted our best efforts to the continuous technical innovation and the development of new products with accumulated knowledge and technology in consideration with the characteristics of pressure, temperature and fluid of all kinds of pipe line based on the high quality and the excellent technique upon the demand and request of user, and thus are already acknowledged in its quality and performance by domestic and foreign market. We promise you that we will manufacture the products with our eagerness and sincerity even a small quantity, by the attitude which we will assume responsibility of our products until end, taking our principle as the honesty and the trust, and moreover hope you to be prosperous and to have the endless development. We want your favorable encouragement and continuous guidance from now on. Thank you

President, H.B.Lee

DKTMI INT'L Company History

1980

- 1986. 05. The foundation as named Dongkwang Precision Ind.
- 1989. 12. The production of Butterfly Valve

1990

- 1992. 10. The vendor registration of POSCO CO., LTD.
- 1992. 12. The vendor registration of Yechone Namhae Chemical Ltd.
- 1993. 06. The Establish of our own foundry
- 1995. 08. The turnover as named Dongkwang Valve Co., Ltd.
- 1998. 06. Acquired ISO 9001 Certificate
- 1998. 07. The establish of second factory
- 1999. 03. The vendor registration of HANJIN Heavy Ind., Ltd.

2000

- 2002. 03. The vendor registration of Daelim E&C
- The vendor registration of Hyundai E&C
- 2006. 08. The vendor registration of Hyundai Samho Heavy Ltd.
- 2006. 10. Acquired "ABS Type Approval" Certificate
- 2006. 11. Acquired "CE" Certificate
- 2007. 03. Acquired "API" Certificate
- 2007. 04. The vendor registration of SK E&C.
- 2007. 05. The vendor registration of DONGYANG Chemical Co., Ltd.
- 2007. 06. The vendor registration of HONAM Petrochemical Ltd.
- 2008. 07. The Established of R&D Center
- 2008. 10. Acquired "Lloyd's Type Approval" Certificate
- 2008. 11. Acquired "Innobiz company certificate"
- 2008. 12. Acquired "DNV" Type Approval

Quality management Facilities and Equipments

DK T.M.I INT'L is always stepping ahead with the second to-none competitive power to make a difference from other rival companies thanks to the complete system by linking with the up-to-date equipments and the best quality management in a systematic way!

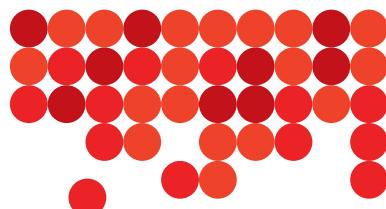

CERTIFICATE

Received certification in outstanding technology and high quality

INDEX Butterfly Valves

- General Certificate 6 Specifications 7 Standard model guide 8~9
- Wafer, Lug, Flange type Features 10 Dimensions 12~14 Elastomer Properties 15
- Teflon Lined Feature 16 Dimensions 17

SPECIFICATIONS

Standard according to ISO 5752 - BS 5155 - MSS SP 67 - API 609

Product range 40mm up to 1200mm (1½ " ~48")

Pressure range designed for maximum working pressure of 10bar

Flange connections The shape of valve body has been so designed as to allow flange bolt alignment onto following standards. Wafer type valve has been successfully developed to fit multi functional application onto either connection standard in the same configuration, mainly

- ISO PN6, 10, 16 • ANSI B 16.1 CL. • BS 4504 PN6, PN10, PN16 • AS 2129 Table D and E

- MSS SP 44 CL. 150 • ANSI B 16.5 CL. 150 • BS10 Table D and E • JIS B 2210 5K, 10K

Face to face dimensions in accordance with ISO 5752, BS 5155, MSS SP67 and AP I609

Actuator connection valves can be fitted with any 1/4 turn actuator equipped with a mounting plate meeting the standard ISO 5211

Test Inspection DK valves are guaranteed to seal perfectly (no visible leakage) in both flow directions. The test conforms to API 598

. **Body test** : 1.5times the maximum working pressure with water. The test is performed on the assembled valve with the disc in half open position.

. **Seat and shaft seal test** : 1.1 times the maximum working pressure. The shaft seal test and inspection is conducted simultaneously with seat test.

Standard materials

(14"~24")

GENERAL FEATURES

KS B 2813

Wafer butterfly valve of which retentive elastomer liner can be replaced on site without extra tools Complete, permanent and continuous leak-tightness provided by spherical contact between the disc and the liner and shaft sealing provided by flatly raised seat surface and polished disc-hub area.

Leak-tightness at Line stream

A perfect zero leakage seal at bi-direction is obtained by the compression of the inner between the valve body and the edge of the disc. A perfect zero leakage seal is provide by means of flatted liner area around both up and down shaft passages and the spherically machined disc.

:: Heavy duty top bushing absorbs side thrust load

:: Mounting plate in accordance with ISO standard

:: Sealing

Hub seal provided by preloaded contact between flatted seat surface and spherically machined and polished disc-hub area for positive sealing at all disc positions.

:: Disc edge

Spherically machined and polished disc edge provide full concentric sealing, lower lever torques, seat life and positive shut-off closed at both directions.

:: Liner

Retained resilient seat to valve enable easy replacement and isolates the body and stem from the flow. Special design of built-in O-ring provides positive flange sealing with no pipeline gasket required.

:: Piping guide rib

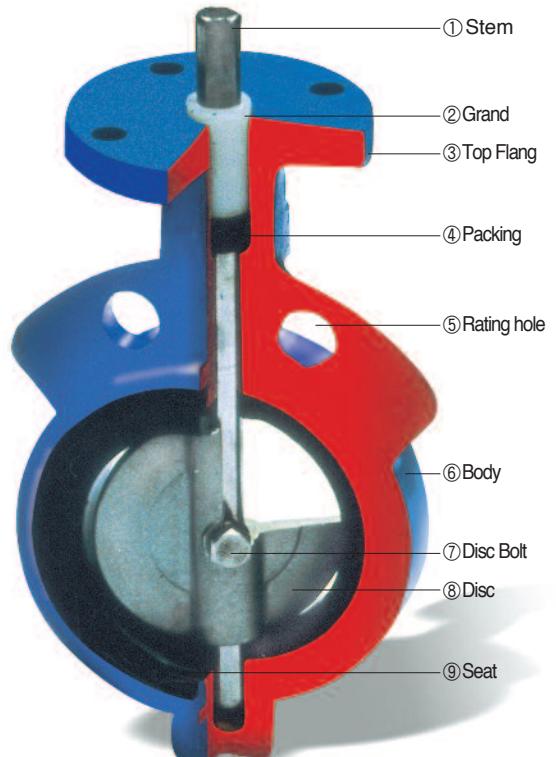

Flange bolt alignment and installation suit for multi-national standard such as JIS, DIN, ANSI and BS flange standard.

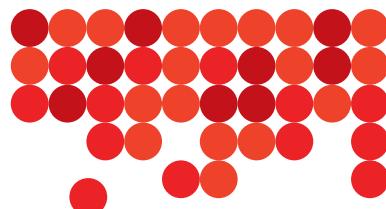

:: Body

Face to face dimension in accordance with API and ISO standard

:: Thru-shaft

provide high strength and absolutely BOLTED disc control and gives minimum obstruction to flow

SPECIFICATIONS

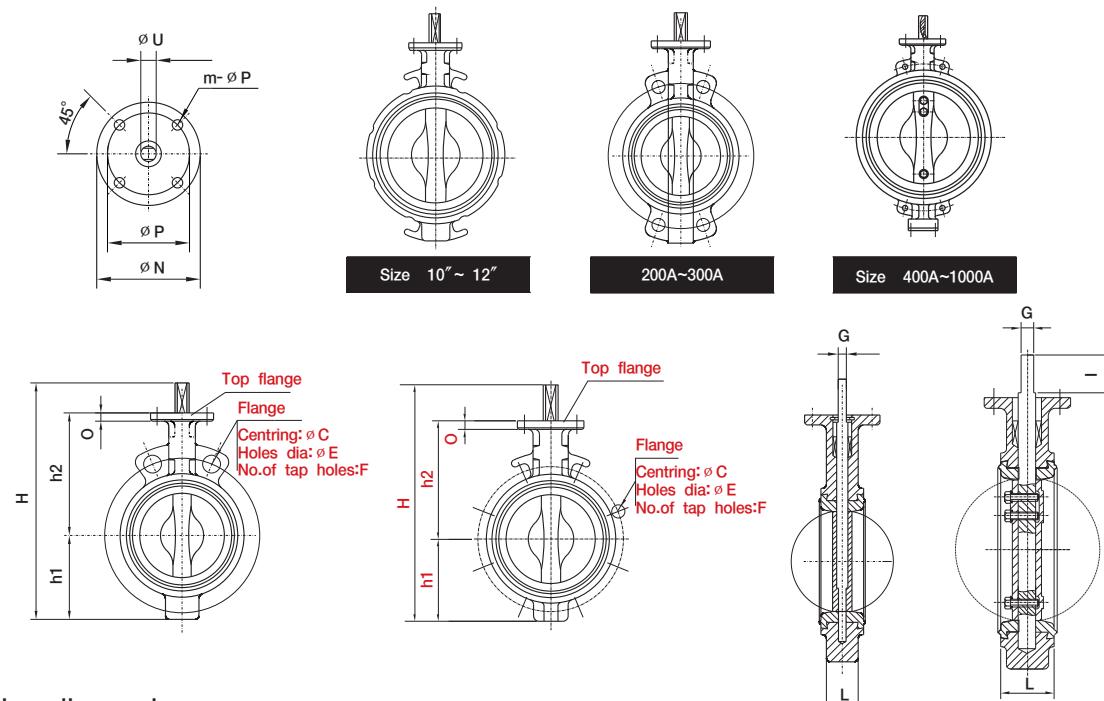

- Standard** according to KS B 2813
- Product range** 50mm up to 600mm
- Pressure range** designed for maximum working pressure of 10k
- Flange connections** KS B 1511 10k
- Face to face dimensions** in accordance with KS B 2306, ISO 5752 - Series No. 46.
- Actuator connection**
valves can be fitted with any 1/4 turn actuator equipped with a mounting plate meeting the standard ISO 5211
- Test Inspection**
DK valves are guaranteed to seal perfectly (no visible leakage) in both flow directions. The test conforms to KS B 2813
 - Body test : 1.5times the maximum working pressure with water. The test is performed on the assembled valve with the disc in half open position.
 - Seat and shaft seal test : 1.1 times the maximum working pressure. The shaft seal test and inspection is conducted simultaneously with seat test.

ELASTOMER PROPERTIES

Elastomer's characteristic and properties are derived from the manufactures and purely indicative. It means that actual working conditions and limit may differ from the values referred. Since many factors influence corrosion and abrasion due to type of fluid, concentration, temperature, turbulence, impurities and etc, the final choice is to be taken care by the customer.

Elastomers	Chemical group	General Application	Service Temperature
EPDM Ethyene propylene	Ethlens Propylene Terpolymer	Water–Steam Sea Water Brine Esters Alkalies Ozone Ketones Alcohols Brake Fluid Treated Water With Caustic soda	–15°C to + 100°C
NBR/ BUNA-N Nitrile rubber	Butadien Acrylonitrile Copolymer	Hydrocarbons Natural Gas Oil and Fat Air Gasoline	–10°C to + 80°C
SBR		Acids and Alkalies	–20°C to + 80°C
FPM Viton	Fluorocarbon polymer Viton	Acids Oils Hydrocarbon	–20°C to + 140°C
SI Silicone	Organic silicon polymer	Food Beverage	–20°C to + 120°C
PTFE Teflon	Polyflon TFE	Solvents Corrosive Products	–10°C to + 120°C
CR Neoprene	Chloroprene polymer	Acid, Ozone, Oils Fats Solvents	–10°C to + 90°C

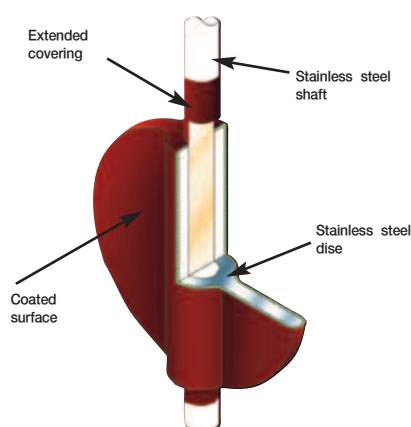

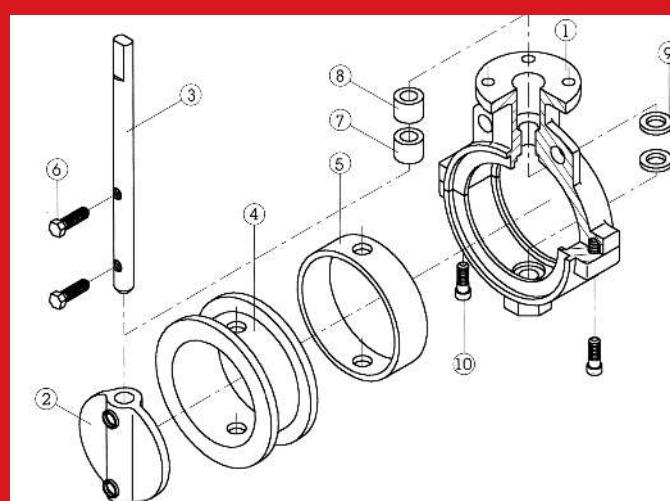

TWO PIECE SPILIT BODY TEFLON® LINED

Teflon® covered one-piece stainless steel disc and shaft

The seat configuration of the resiliency of elastomer back-up ring and the chemical resistance of a Teflon® provide the valve with more suitable application to toxic and corrosive media where elastomers are unsuitable.

One-piece disc/shaft provide the very minimum obstruction to fluid flow since shaft-attachment obstruction eliminated. This results in excellent flow characteristics and a valve particularly is suited for the processing industries because fluid contact is limited to the seat and disc only

Teflon® is inert to almost all chemical agents and solvent and has simultaneously excellent properties such as resistance to corrosion and heat and non-adhesive. The valves fully utilize this property in food industry disliking contamination as well as chemical industries. Non-adhesive Teflon® sand smooth surface prevent adhesion or stagnation of foreign matters and quality changes of flow.

One-piece Stainless steel disc/shaft

Cut away PFA coated Disc-Stem

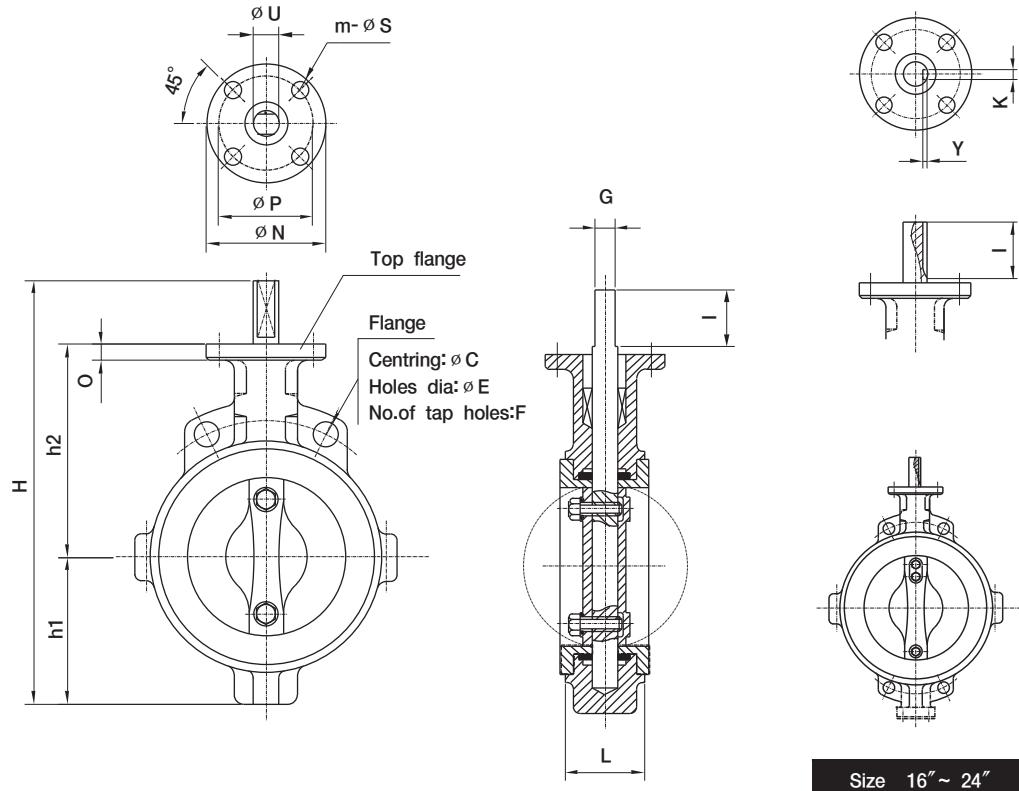

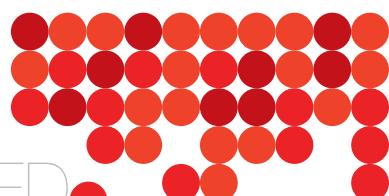

Stainless steel with finish allows proper secondary seal and bearing conditions at seat hole

Extended covering from primary seal through secondary seal into seat hole area assures stem isolation

Complete encapsulation affords complete isolation of steel disc

PFA-covered disc suitable not only for chemically resistant but to handle abrasives in the processing industries

TWO PIECE BODY TEFILON LINED

■ STANDARD SPECIFICATION

Enclosure	Watertight Ingress Protection 67 Nema 4 and 6
Ambient Temperature	-20°C to +70°C, 150°C / 1hr
Power Supply	110 / 220 VAC, 1 Phase (60 / 50 Hz)
Control Power	380 / 440 VAC, 3 Phase
Torque Switches	1 Phase, 60 / 60 Hz
Limit Switches	2 Open / Close (Except NA 06, NA 09)
Stall Protection	2 Open / Close, 250 VAC 1mA Rating
Shaft Protection	Built-in Thermal Protection (Open 150°C ± 5°C / Close 97°C ± 15°C)
Travel Angle	90°
Indicator	Continuous Position Indicator
Manual Override	Hand / Auto Decoupling Mechanism
Self Locking	Provided by means of Worm Gear
Mechanical Stops	External Adjustable Screws
Space Heater	20 W (110 / 220 VAC, 24 VDC)
Conduit Entries	Two PF 3/4" (INPT 3/4")
Lubrication	Grease Moly (EP Type)
Materials	Steel, Aluminum Alloy, All Bronze
Surface Treatment	Anodizing
External Coating	Dry Powder, Epoxy - Polyester, Polyester(TGIC-Free)

ACTUATORS

PNEUMATIC CYLINDER

Features & Technical Date

Actuator Feature and Advantage

1. Scotch-yoke type.
2. No Metal to metal touch
3. Torque curve ≈ Rotating valve torque It produces great torque at the beginning and the end position of rotating valves.
4. Double piston ring(EPDM and Teflon).The drive shaft is guided by protect seal of drive shaft.
5. Perfect weather proof.
6. No fitting & tube necessary - "namur" standard.
7. paint:surface-Anodized internal-Double coating.
8. Easy maintenance- "ISO" standard.
9. High quality and low price

OPERATING CHARACTERISTICS FOR SIZING

TORQUES

The factors affect the torque required to operate the valves.

- Valve diameter
- Shaft diameter
- Bearing friction coefficient
- Type of seat material

Size		Shut off Pressure in Bar			
mm	Inch	3.5Bar	6Bar	10Bar	16Bar
40	1 1/2	10	10	13	14
50	2	12	22	25	25
65	2 1/2	17	23	28	29
80	3	25	35	31	37
100	4	41	40	52	59
125	5	58	66	74	89
150	6	87	91	109	126
200	8	156	170	180	260
250	10	243	276	320	390
300	12	342	389	484	560
350	14	488	544	680	1520
400	16	667	762	880	2030
450	18	887	1023	1261	2493
500	20	1146	1322	1630	3076
600	24	2386	2781	3256	4150
700	28	2710	3300	4050	5650
750	30	3000	3940	4590	6040
800	32	3540	4340	4990	6640
900	36	4640	5360	6940	9490
1000	40	6300	7800	9940	13240

Actuator torques can be calculated using the following formulas.

$$Ta = Tb + Ts + Th = 1.2Tb \pm Td$$

$$Ts = CsD^2$$

$$Tb = 4.17D^2 dfP$$

$$Td = CtD^3 P$$

$$Th = 3.06D^4$$

$$V = Cf \sqrt{p} = \frac{Q}{0.785D^2}$$

Ta : The required actuator torque(lb-ft)

Ts : Seating or unseating torque(lb-ft)

Td : Dynamic torque(lb-ft)

Th : Hydrostatic torque(lb-ft)

Q : Flow(cubic feet per second)

V : Velocity(feet per second)

D : Diameter of valve(feet)

d : Diameter of Shaft(inch)

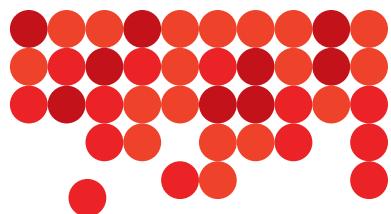

P : Pressure drop across valve(psi)

Cs : Coefficient of Seating or unseating torque

Ct : Coefficient of dynamic torque

Cf : Coefficient of flow

f : Bearing friction coefficient

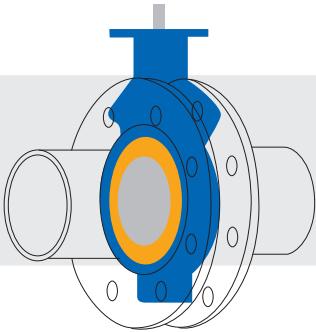

INSTALLATION

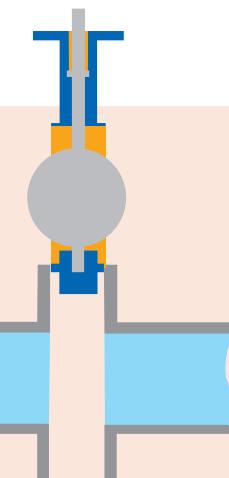

배관 파이핑 테스트를 할 경우 차단용 플랜지 대용으로 밸브를 사용하여서는 안되며 필히 완전열림 상태이어야 한다.
On piping test, Valve can not use in stead of isolation flange as substitute, Valve Should perfectly open

PROPER INSTALLATION

DO NOT USE GASKETS

IMPROPER INSTALLATION

Pipework opened to allow valve free entry, disc in semi-closed position

- ▶ 디스크를 약간 연 상태에서 밸브가 자연스럽게 끼워질 수 있도록 후렌지간격을 벌린 후 삽입.

Pipework not spread sufficiently could tear rubber, disc position open will foul flange and score disc edge

- 주의! 빙드시 후렌지 융접후 밸브를 설치할것 (밸브설치후 융접 업금)
- ▶ 후렌지 간격을 충분히 벌리지 않으면 씨트가 빛어질 우려가 있고, 디스크를 완전히 연 상태로 삽입하면 후렌지와 디스크 가장자리가 부딪침으로서 디스크에 흠이 생길 우려가 있음.

Valve in semi-open to protect disc edge and reduce rubber interference during installation and start up, this helps reduce initial torque build up.

- ▶ 디스크를 약간 연 상태면
 1. 디스크의 가장자리를 보호하고
 2. 설치시 씨트의 간섭을 감소시키며
 3. 최초 토크의 발생을 감소시킨다.

Disc as shown in fully closed position cause seat distortion, than subjected to flange draw will close rubber round disc creating excessive torque in initial operation

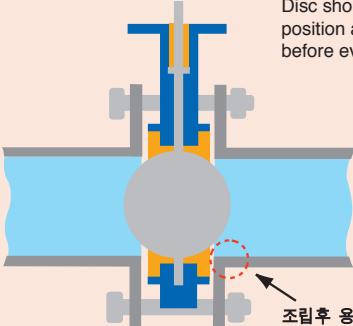

- ▶ 그림처럼 디스크가 완전히 닫힌 상태이면 씨트가 찌그러질 우려가 있고, 이 상태하에서 블트를 조이면 씨트가 디스크 옆으로 부풀어올라서 필요이상의 토크가 요구됨.

Disc should be turned to full open position after flange alignment and before eventy pulling up flange bolts.

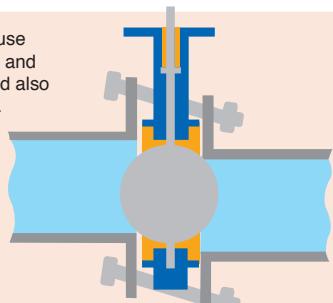

- 주의! 가스켓(Gasket)을 사용하지 말것.
- ▶ 후렌지 조정이 끝난 후 디스크를 완전히 연 상태에서 후렌지 블트를 조임.

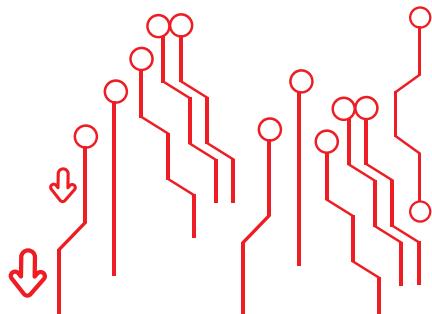

Incorrect pipe alignment will cause interference between disc edge and flange face creating leakage and also excessive torque to open valve.

- ▶ 후렌지 조정이 부정확하면 디스크 가장자리와 후렌지면 사이에 틈이 발생하므로 누수되기 쉽고 밸브를 열때 필요이상의 코르크가 요구됨.

조립후 용접 불가
